

Fairham Mouldings is a technically led company, specialising in the manufacturing of high quality precision rubber components.

Our engineering expertise includes design, mould making and manufacture of rubber mouldings which meet the specific requirements of clients for all industrial applications.

Our principal objective is to achieve complete customer confidence in our ability to supply high quality, cost effective solutions.

**We are committed to complying with customer requirements by:**

- giving attention to detail in determining customer requirements
- setting up for manufacture so as to meet the requirements economically
- manufacturing under close process and product quality controls to give high quality products at efficient production rates
- being flexible in supplying customer orders to requirement using the best quality materials

**We will maintain the quality of operations by:**

- operating effective management systems including managing the quality of operations in accordance with ISO 9001
- ensuring that staff carry out only those tasks for which they are formally authorised as a result of experience or qualification
- ensuring company experience is maintained in a wide range of materials

**We seek to continually improve the effectiveness of our processes and quality management by:**

- setting objectives for the quality of our products and operations
- reviewing performance against those objectives
- valuing and encouraging high quality work by individual employees
